

How to Apply FLYT the Right Way?

Before You Begin

1) Wash 2) Machine Polish 3) Degrease

(Suitable application for painted surfaces and clear coat.)

Flyt Application Process:

Step 1:
Gently shake the Flyt Bottle.

Step 2:
Open the lid and apply a generous amount to a dry, new applicator pad.

Step 3:
Apply the coating in a cross-hatch pattern on a small area. Ensure the coating is applied evenly to avoid any high spots.

Step 4:
Wipe off the coating immediately (max 30 seconds) after application on the panel. Use two microfiber cloths to wipe off the coating: one to remove most of the coating and the second to wipe off any leftover residue.

Step 5:
The aircraft can be operated after 24 hours. However, avoid manual washing for upto 7 days & reduce contact with water if possible.

How to Maximize Results?

- ✓ Work small sections at a time
- ✓ Avoid direct sunlight.
- ✓ Inspect the surface to ensure no spots are missed.
- ✓ Use minimum 380 gsm cloths to wipe off coating for the best results.

Please Note: Apply 2 layers of Flyt for a 3-year warranty, with a 45-minute interval between layers in summer and 60 minutes in winter. No reapplication required.
